

designing for positive outcomes

Creating wellness within.

As we design the healthcare spaces of tomorrow, we look to environments that evoke a sense of comfort and wellbeing. To design for health and positive outcomes from the inside out. To connect our inner spaces with our outer world. To focus on people and place. The spaces that promote wellness and transform our experiences are rooted in a balanced approach, combining material health, durability, performance and design – all for greater impact. Because every space should be a wellness space.

transforming healthcare spaces from the inside out /

Let's take a look at the variety of spaces that define a healthcare environment. And, how each plays a different role in the patient and caregiver experience. Transforming a healthcare space is about the places we use and our place in the world – creating environments to positively influence outcomes and quality of care. From material health to inspiring design to wellness within, we create experiences for people. For working, living, learning, healing.

featured product | Pursue in authentic + Sense sheet in care

designing for wellness + wellbeing

Certain elements of design are like essential ingredients. They can compose a narrative, enhance a story, evoke a feeling — creating a natural sense of place. Within healthcare spaces, we often look to these elements to promote wellness and wellbeing. Designing to support a system of care for all who use a space.

featured product | Valencia area rug in cobre, Homegrain in parlor + gallery

biophilia

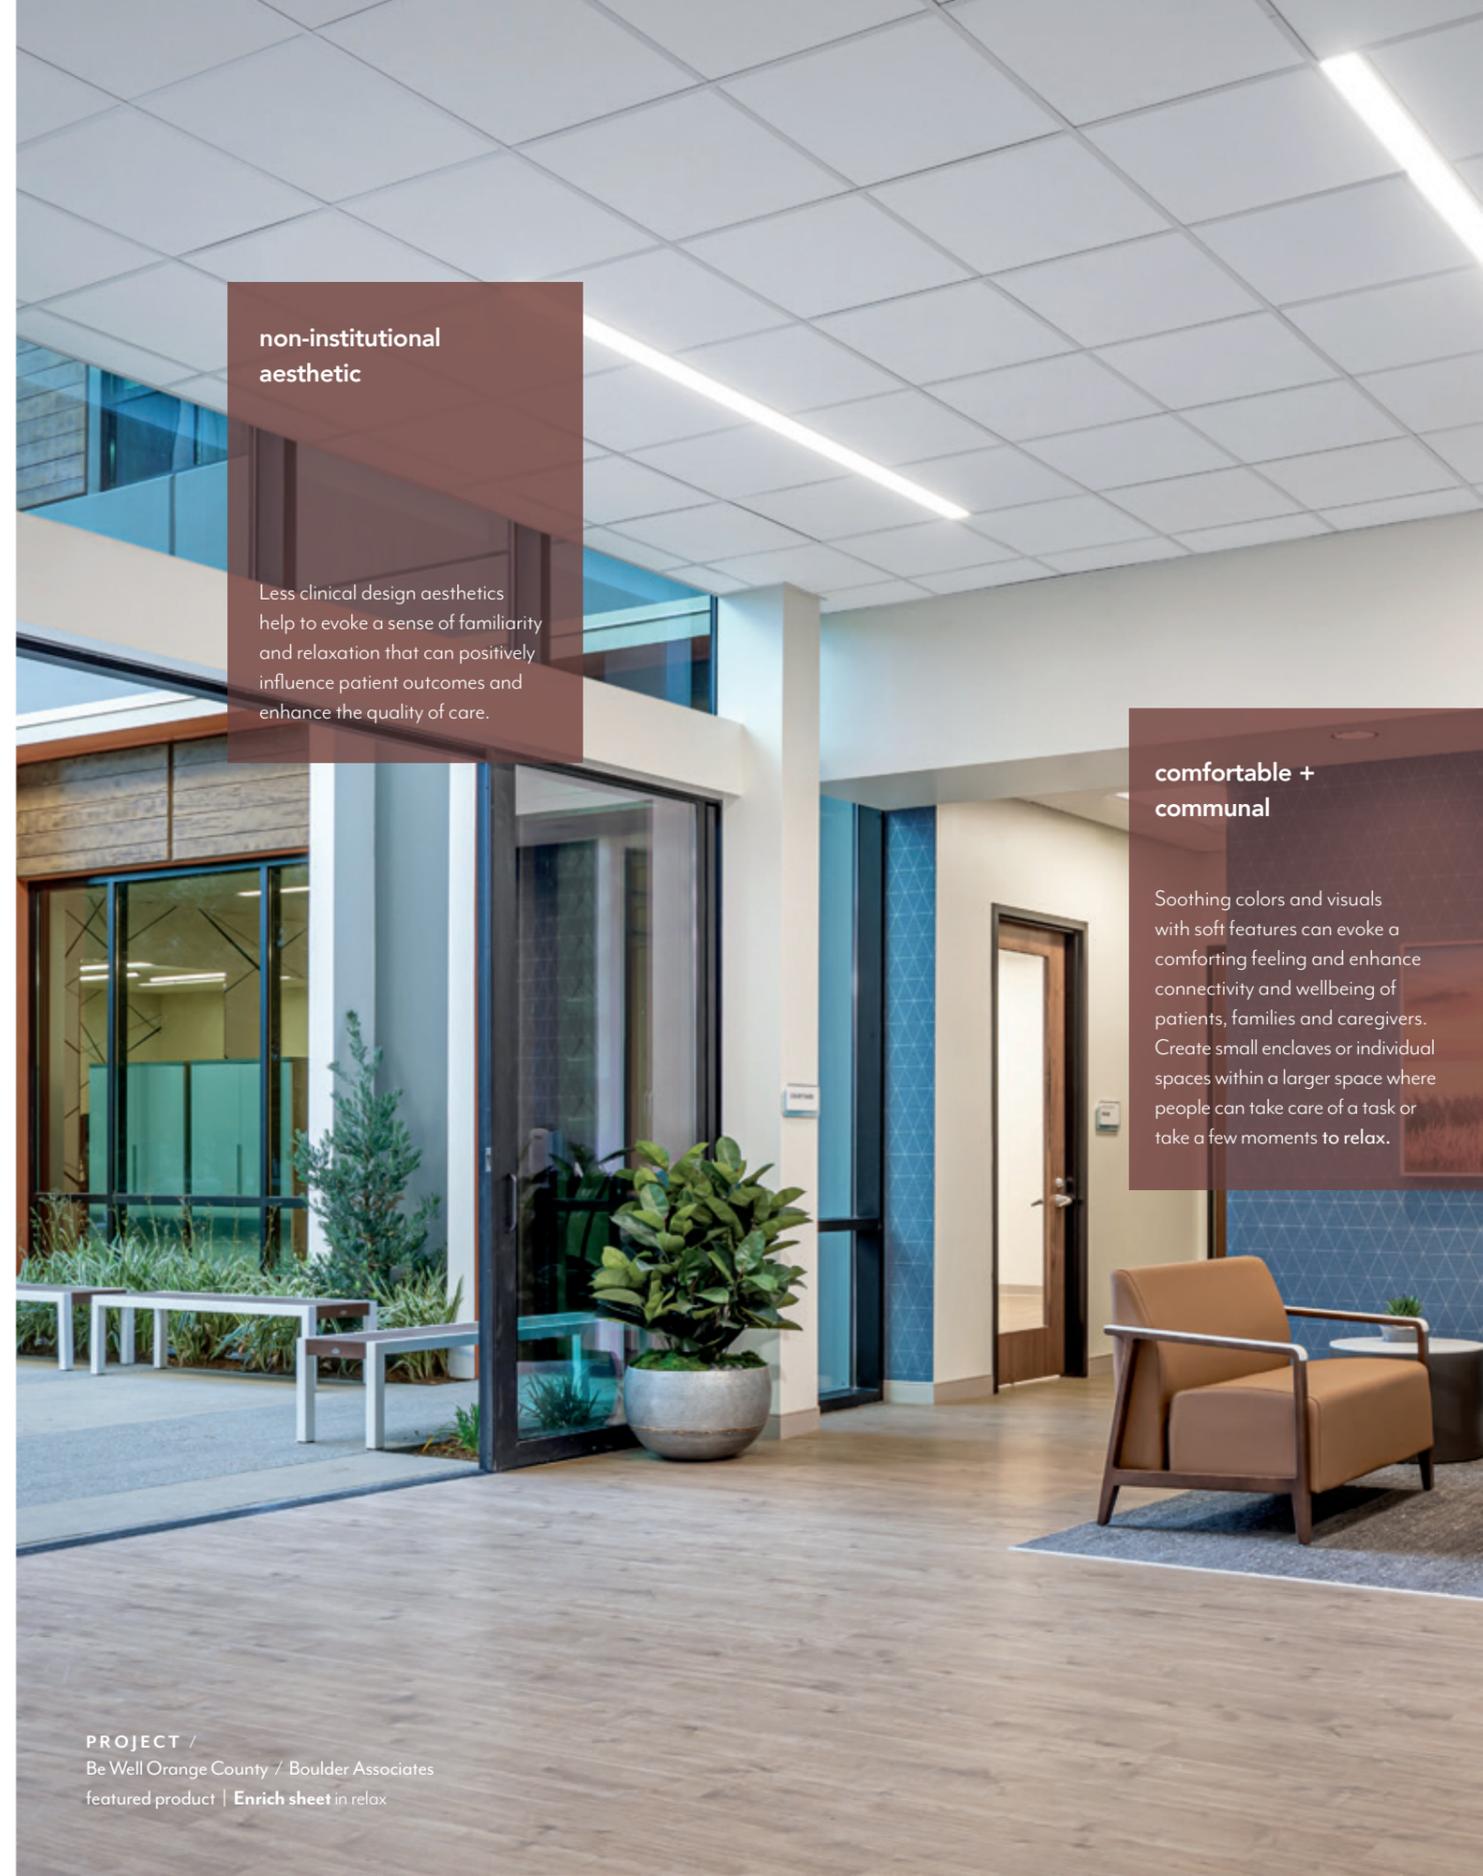

Nature has a direct impact on our health and wellbeing. It enhances moods and promotes positive outcomes. From visuals inspired by nature to the use of natural light, biophilic design that taps into all of the senses helps create mindful spaces that promote healing essential for the recovery process.

non-institutional aesthetic

Less clinical design aesthetics help to evoke a sense of familiarity and relaxation that can positively influence patient outcomes and enhance the quality of care.

comfortable + communal

Soothing colors and visuals with soft features can evoke a comforting feeling and enhance connectivity and wellbeing of patients, families and caregivers. Create small enclaves or individual spaces within a larger space where people can take care of a task or take a few moments to relax.

bio-based resilient
soft surface + carpet tile

In addition to being warm and welcoming, reception and waiting areas need to be high-performing to meet the demands of a busy environment. Combining hard and soft surfaces in these areas provides comfort and durability. High-performing flooring features – from appearance retention to stain resistance, and ease of maintenance to cleanability – are important attributes to consider.

stain resistance

easy to clean +
maintain

acoustics +
sound control

procedure + operating rooms

Durable, easy to clean and maintain, and easy to install flooring is critical in these high-performing, highly efficient spaces. Mobility and adaptability are key in these fast-paced environments.

featured product | Pursuit sheet in natural, Sense sheet in esteem

featured product | Admix in white coral + shark's tooth

In areas where a higher level of infection control is a concern, seamless flooring is critical. Flooring that can cove up the wall and be welded at the seam provides a non-porous surface that is easy to clean and sanitize. Additionally, consider the flooring's ability to withstand the weight of rolling loads and its stain resistance to ensure durability.

featured product | **Admix** in fresh + sand dollar

Hubs and transition zones are high-traffic, high-activity areas in a healthcare environment. Walkways, corridors and nurses' stations are some of the busiest areas of a hospital. Roller mobility, scuff and scratch resistance, cleaning and maintenance — in addition to acoustic performance to help reduce reverberating noise — are the key performance needs of these spaces.

When specifying flooring, consider the flow of traffic from both the people and the equipment that move through these spaces. Prioritize performance attributes including roller mobility, stain resistance and easy to maintain — in addition to acoustic performance to help reduce reverberating noise and promote privacy.

roller mobility + durable for rolling loads

stain resistance

easy to clean + maintain

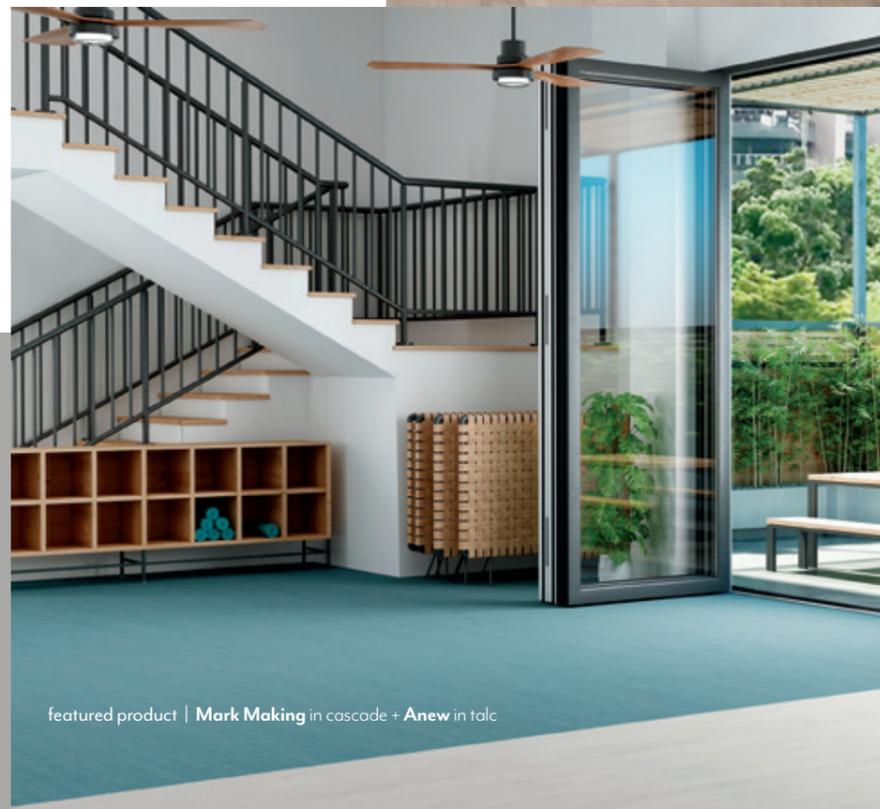

acoustics + sound control

wellness + rehabilitation

Active spaces that are designed for recovery should promote health and wellbeing from the inside out. Evoke a sense of mindfulness and relaxation through biophilic elements to enhance positive outcomes.

HENRY FORD HEALTH SYSTEM / CREATING AN ECOSYSTEM OF CARE

PROJECT /
HENRY FORD HEALTH

FIRM /
GENSLER

Henry Ford Health is a leading health care and medical services provider. Serving communities across Michigan, Henry Ford Health provides a full continuum of services – from primary and preventative care, to complex and specialty care. In 2017, as part of an ambulatory care expansion, they turned to Gensler to partner on the design of several new sites. Gensler sought to create spaces that enhance a sense of wellbeing, transforming the patient experience. Specifying flooring with material health in mind, Gensler chose Patcraft's EcoSystem bio-based resilient collection – a balanced product solution merging performance, sustainability and design.

TRANSFORMING HEALTHCARE SPACES

“CHOOSING A COLLECTION WITH BOTH A WOOD VISUAL AND AN ABSTRACT PATTERN MADE PRODUCT COORDINATION SEAMLESS. USED TOGETHER, THE TWO VISUALS HELPED TO CREATE A WELCOMING AND CALMING ENVIRONMENT.”

WELLNESS WITHIN

BIO-BASED RESILIENT / MATERIAL HEALTH FROM THE INSIDE OUT

EcoSystem bio-based collection is a PVC-free construction made from rapidly renewable resources and contains no ortho-phthalate plasticizers or solvents. A high-performance flooring solution that provides dimensional stability and superior strength – its non-porous construction and **ExoGuard® top-coat** can withstand scratches and stains. In coordinating abstract and wood visuals in sheet and plank options, it's ideal for a variety of healthcare spaces.

A non-PVC resilient with no ortho-phthalate plasticizers or solvents, EcoSystem has an HPD and is **Cradle to Cradle Certified® Silver, Greenhealth Approved** and **FloorScore certified**.

HETEROGENEOUS SHEET + PLANK

WITHIN

Designed for flexibility in use throughout healthcare spaces and beyond, Within is a coordinating plank and heterogeneous sheet resilient collection available in both abstract and wood visuals. With soothing patterns and nature-inspired colorways, enhance a calming aesthetic through inspired design. Featuring a 20 mil wear layer for superior durability and an ExoGuard® finish that provides enhanced scratch and stain resistance, it is a high-performing flooring solution for high-demand areas. Performance. Durability. Design.

SENSE PLANK in ease, strength, engage + promise / installation in monolithic / PURSUE PLANK in restful / installation in brick

The Within collection includes wood visuals and abstract patterning in both sheet and plank options, providing design flexibility throughout a space. The wood visual, Pursue, is embossed in register and available in nine warm and inviting colorways. The abstract visual, Sense, is offered in eight colorways in fresh neutrals and nature inspired hues.

inside the design /

Constructed with a durable **ExoGuard** topcoat, Within offers superior resistance to soil, stains, scratches and abrasions, as well as protection against damage from alcohol-based hand sanitizers. Within is polish optional making cleaning easy with low-cost maintenance and eliminating harsh cleaning chemicals in the breathing zone.

HOMOGENEOUS SHEET

HOLISTIC

A homogeneous sheet designed and engineered for high-demand environments, Holistic offers unparalleled strength and durability. Ideal for healthcare, including acute care and other clinical spaces, the collection features a true through-pattern continuous construction for even wear, maintaining a consistent appearance throughout. Holistic products are easy to heat weld and flash cove for seamless installation within healthcare spaces where infection control is critical. In three coordinating styles in 72 colorways, the Holistic collection offers a spectrum of colorways from bright pops of color to soothing neutrals for seamless design. High-performing. Flexible. Versatile. Holistically designed for healthcare.

HOMOGENEOUS TILE

ADMIX

Originally launched in 2016, AdMix is re-introduced with eight new colorways. Using an innovative translucent resin flake for depth and dimension, AdMix offers neutral tones for flexibility in design and bright shades for energetic, playful spaces. In 18 x 36 and 36 x 36,

AdMix is a 100% homogeneous solid resin resilient that is constructed to withstand the most demanding environments.

With a 25-year commercial limited warranty, AdMix is virtually seamless when installed and can be heat welded and flash covered, ideal for acute healthcare spaces. Low-cost maintenance, scratches, scuffs and stains can be easily buffed.
