Patcraft’s LVT resilient plank flooring is engineered for performance. Designed for light commercial installations, Woodland View is manufactured to provide the visual of hardwood flooring in a more durable commercial grade resilient product that is suitable for housing, dorms, assisted living and other moderate end use installations. Durability, wear retention, longevity and many other performance requirements drive Patcraft product design so you know when you specify Patcraft, you specify performance.
Features and Benefits

• High performance resilient designed for light commercial environments.
• ExoGuard™ Quartz Enhanced Urethane finish and 12 mil wear layer ensures performance in a variety of low to moderate commercial applications.
• Active antimicrobial, FlorSept®, defends against bacteria and fungi.
• 7 year light commercial wear warranty.
• High performance matte finish is polish and buff optional for hassle free maintenance.
• FloorScore® certified for low VOCs.
• Recommended Applications: light commercial end use applications including commercial housing, assisted living, medical office building, student housing and low traffic retail.

Maintenance

Patcraft resilient products do not always require a floor finish. However, in certain applications a floor finish may be desirable to aid in stain resistance, resistance to abrasion or increased gloss level.

Construction

ExoGuard Quartz Enhanced Urethane

12 mil Clear Wear Layer

High-Res Image Layer

Commercial Floor Base

Commercial Backing Layer

Warranty

7 year light commercial wear warranty

Installation

(see patcraft.com for complete installation instructions)

- Flooring material and adhesive must be acclimated to the installation area for a minimum of 48 hours prior to installation.

- Ensure that moisture tests have been conducted and that results do not exceed 7.0 lbs per 1000 sf in 24 hours as per ASTM F-1869, (or 87% when using Shaw 4100 or 90% when using Shaw S150) In-Situ relative humidity when tested according to ASTM F-2170.

- pH of concrete sub-floor must not exceed 10.

- Patcraft LVT is installed using conventional tile installation techniques.

- Use Shaw S150 spray adhesive or Shaw 4100 and a 1/32” x 1/16” x 1/32” U-notch trowel to permanently install resilient flooring.

- In most cases, the tile should be immediately placed into the adhesive, before the adhesive has had an opportunity to dry. Good transfer of adhesive to the backing of the tile is essential for proper bond.

- Material should always be visually inspected prior to installation. Any material installed with visual defects will not be considered a legitimate claim as it pertains to labor costs.
