A DCOF value of > 0.42 is the new standard for tiles specified for commercial application in standard A137.1-2012, Section 9.6. It replaces the SCOF value of > 0.60 referenced in ASTM C1028. For more information on the correlation between the two values and about the DCOF AcuTest visit the Tile Council of North America’s website: www.tcnatile.com

**MANUFACTURER’S WARNING:**

- Tiles with DCOF AcuTest values less than .42 are not recommended for use in areas with wet or slippery conditions. If such tiles are used as a walking surface where water, ice, oil, grease and/or other substances are present, such a condition could cause a reduction in foot traction and become unexpectedly slippery resulting in a fall and personal injury. See ANSI standard A137.1 section 6.2.2.1.10, available at www.tcnatile.com/sections6.2.2.1.10.html.
- Water, oil, grease, etc. create slippery conditions. Floor applications with exposure to these conditions require extra caution in product selection. Not for use on ramps.
- For additional information, refer to Factors to Consider.
- Since there is a shade variation on all natural products, the tile and trim supplied for your particular installation may not match these samples. Final selection should be made from actual tiles and trim and not from tile and trim samples or color reproductions. Manufactured in accordance with ANSI A137.1 standards.

• Tiles with DCOF AcuTest values less than .42 are not recommended for use in areas with wet or slippery conditions. If such tiles are used as a walking surface where water, ice, oil, grease and/or other substances are present, such a condition could cause a reduction in foot traction and become unexpectedly slippery resulting in a fall and personal injury. See ANSI standard A137.1 section 6.2.2.1.10, available at www.tcnatile.com/sections6.2.2.1.10.html.
• Water, oil, grease, etc. create slippery conditions. Floor applications with exposure to these conditions require extra caution in product selection. Not for use on ramps.
• For additional information, refer to Factors to Consider.
• Since there is a shade variation on all natural products, the tile and trim supplied for your particular installation may not match these samples. Final selection should be made from actual tiles and trim and not from tile and trim samples or color reproductions. Manufactured in accordance with ANSI A137.1 standards.

Benefits
121 Calacatta Oro
## Benefits

- **SPLENDID POLISHED**
  - Nano sealed — does not require sealing on most normal applications.
  - Uses the chemical method as described above. Suitable for most residential, but commercial may benefit from a sealer application. Sealer recommended if using a high-performance or contrasting grout color.

### Technical Details

- A DCOF value of > 0.42 is the new standard for tiles specified for commercial application in standard A137.1-2012, Section 9.6. It replaces the SCOF value of > 0.60 referenced in ASTM C1028. For more information on the correlation between the two values and about the DCOF AcuTest visit the Tile Council of North America’s website: www.tcnatile.com

**MANUFACTURER’S WARNING:**

- **Tiles with DCOF AcuTest values less than .42 are not recommended for use in areas with wet or slippery conditions.** If such tiles are used as a walking surface where water, ice, oil, grease and/or other substances are present, such a condition could cause a reduction in foot traction and become unexpectedly slippery resulting in a fall and personal injury. See ANSI standard A137.1 section 6.2.2.1.10, available at www.tcnatile.com/sections6.2.2.1.10.html.

- **Water, oil, grease, etc. create slippery conditions.** Floor applications with exposure to these conditions require extra caution in product selection. Not for use on ramps.

- **For additional information, refer to Factors to Consider.**

- **Since there is a shade variation on all natural products, the tile and trim supplied for your particular installation may not match these samples.** Final selection should be made from actual tiles and trim and not from tile and trim samples or color reproductions. Manufactured in accordance with ANSI A137.1 standards.

**Integra Color Grout 137PM All-in-One Thin Set Adhesive and Grout for Glass Tile Installations**

Shaw suggests installing this and other glass products with Merkrete’s Integra all-in-one thinset and grout. It is an excellent solution for setting glass and mosaics on backsplashes and in other applications, resulting in a faster and cleaner installation.

**Product Description**

**BASIC USE:** Merkrete Integra mortar’s both a thin set adhesive and grout for installing glass tile on walls and floors.

**Technical Data**

Applicable Standards: Integra meets or exceeds industry requirements ANSI A118.4 for latex portland cement mortar. Follow ANSI A108.5 for installation. ANSI A118.6 for portland cement grout and ANSI A118.7 polymer modified cement grout. Follow the TCA Handbook and ANSI A108.10-1999 Installation of Grout in Tile work.

Products installed in an exterior application must comply with applicable ANSI 108 series of the “American National Standard Specifications for the Installation of Ceramic Tile” and comply with TCA installation methods applicable to installation conditions.

SUNDRIES
Tile Trims

- Engineered with Patented Straight Edge Grout Line™
- Protects exposed edges of tile
- Protects against chips and breakage
- 10 Year Warranty on finish
- Proprietary design with more metal in face of profile
- Fewer dings and dents during installation - up to 23% more metal

Colors Codes

- Silver - MF
- Satin Silver - MA
- Satin Nickel - SN
- Sand Stone - SP
- Polished Chrome - BDC

TILE & STONE

Shaw Limited Tile & Stone™ Warranty

The following is the limited warranty issued by Shaw Industries, Inc. for Shaw Tile & Stone™ products. The Company warrants that its first quality tile and stone products are manufactured according to ANSI A137.1 performance standards and meet or exceed these requirements.

What the Shaw Tile & Stone™ Flooring Limited Warranty Covers:
This Tile & Stone™ product has been manufactured in accordance with industry standards. All first quality Tile & Stone™ from the Company is warranted to be free of defects in the quality of the product for one year from date of purchase. This warranty applies to products used in commercial and residential applications.

What you should do if you find that there is a defect in the quality and you need warranty service:
• Notify the authorized Company dealer from which the original purchase was made of any defect no later than 30 days after discovering the defect and within the time period of this limited warranty.
• Present to your authorized Company dealer the following items for a warranty claim to be considered:
  • A detailed description of the problem and/or a photograph/sample that clearly shows the problem.

What Shaw will do should you need warranty service:
Should a defect covered under this warranty be found, the Company will authorize the affected area to be repaired to conform to the warranty. The Company will provide tile and stone for replacement or repair of the affected area, at its option. Due to inherent variations associated with quarried stone and naturally fired Tile & Stone™ products, color and texture variations from samples should be expected. Prior to installation, tile and stone should be approved by customer.

No claims for shade or texture will be honored after installation.

If professionally installed, and the defect was not visible before or during installation, the Company will pay the reasonable labor costs to perform the replacement or repair during the first year warranty period from the date of original purchase. In the event that the color installed is no longer available, the Company will authorize your dealer to replace the affected floor with another Company product of equal value. The above described remedy is the purchaser’s sole and exclusive resolution for claims under this limited warranty.

Each Limited Shaw Tile & Stone™ Flooring Warranty is subject to the following conditions:
This limited warranty is valid only in North America. The warranty is not transferable. This limited warranty applies only where the affected area of the Shaw Tile & Stone™ Flooring is visible. The flooring must be installed in accordance with Tile Council of North American (TCNA) installation guidelines. This limited warranty shall not apply to damage arising from any of the following:
• Accidents, abuse or misuse
• Improper installation
• Exposure to extreme heat
• Improper care and maintenance
• Scratch, impact or cutting
• Freight
• Modification, alterations, repair or service by a non-authorized floor covering dealer
• Problems caused by structural movement/deficiencies in the base of subfloor

You, the original purchaser, will contact your authorized Company dealer and/or Sales Representative for warranty or claim service. Please provide a valid proof of purchase and a detailed description of the issue, along with photographs showing the concern. Samples should be submitted for testing when available.

Dealers/Shaw Sales Representatives will file a claim via www.ShawOnline.com and submit the information you provided. A Shaw claims representative will thoroughly evaluate your claim.

Shaw Industries Financial Services, PO Box 2128, Dalton, GA 30722 - 1-800-257-7429.

NOTE: The warranty is not transferable. It extends only to the original end use purchaser. Shaw Industries Inc. does not grant to any person or entity the authority to create for it any obligation or liability in connection with this product. Shaw Industries Inc. shall not be liable to the consumer or any other person or entity for any incidental, special or consequential damages, arising out of breach of this limited warranty or any implied limited warranty (excluding merchantability).

All implied warranties, including an implied warranty of merchantability or fitness for a particular purpose, are hereby limited to the duration of this limited warranty. Some states do not allow the exclusion or limitation of implied warranties or the limitation of incidental or consequential damages, so the above limitations or exclusions may not apply to the purchaser. This warranty gives the purchaser specific legal rights, such rights may vary from State to State.

11/27/18
Clarity Digital Imaging is the newest technology for applying glaze and design to manufactured tile products. This technology creates more realistic visuals, improved color saturation, and fewer pattern repeats.

The most common traditional glazing application uses rotocolor methods (rotating silicon drums are infused with liquid glaze that are rolled onto the tile creating the pattern and texture). This method creates a two dimensional visual and because of the method a pattern repeat can be more obvious and occur more often. Also, the ability of the glaze to reach the surface edges and heavy textures can be a challenge.

Clarity Digital Imaging is similar to high definition ink jet printing. High tech digital machinery controls every element of the application process. The glaze is applied in multiple layers using spray nozzles and offers ultimate precision and attention to detail.

The ability to manipulate where the glaze is applied on each tile reduces the number of pattern repeats, and as a result, one product can have 40 to 60 different faces—resulting in up to 10× more graphic variation.

The choice is clear, Clarity Digital Imaging by Shaw Tile & Stone.

How Does Porcelain Tile Compare to Ceramic Tile?

Porcelain Tile:
- Is superior in value, durability, color and design
- Requires the finest natural ingredients and a rigidly controlled manufacturing process using the most advanced processes and technology
- Is considerably denser and more impervious
- Has a much lower rate of water absorption, so it’s suitable for interiors and exteriors in all climates
- Is considered frost-resistant
- Has greater breaking strength
- Is fired at extremely high temperatures, becoming 30% harder than natural stone (like granite and marble)
- Costs less than natural stones
- Offers easy installation, wipe-clean maintenance and an incredible range of color options

PEI Ratings

Group 5
Recommended for all interior residential and heavy commercial uses

Group 4
Recommended for all interior residential and moderate commercial uses.

Group 3
Recommended for all interior residential and light commercial uses.

Group 2
Recommended for all walls and bathroom floors where softer footwear is worn.

Group 1
Recommended for residential interior walls.

Shade & Texture Ratings

V1 LOW
Low shade and texture variations within each carton

V2 MODERATE
Distinguishable differences in texture and pattern within each color

V3 HIGH
High shade and texture variations within each carton.

V4 RANDOM
Random variations of shade and texture within each carton.

What is DCOF?

Stricter, More Accurate Testing Results In Superior Tile Products

In 2012 the Tile Council of North America (TCNA) adopted the ANSI A137.1 test protocol known as the DCOF AcuTest for assessing ceramic tile slip resistance for interior application. Shaw Tile & Stone has embraced the TCNA’s new standards for measuring a tile’s frictional resistance as it is closely related to traction and slipperiness. The DCOF AcuTest does not measure the flooring itself but, how the tester, lubricant (sodium lauryl sulfate solution) and tile surface interact which more accurately simulates the conditions of people walking on tile and provides a useful comparison of tile surfaces. The threshold requirement (based on extensive research in Europe and by TCNA) in the American National Standards Institute’s (ANSI) A137.1 is 0.42 DCOF as measured by the more reliable (in terms of safety) DCOF AcuTest. This means that tiles suitable for level interior spaces expected to be walked upon when wet should have a DCOF (Dynamic Coefficient of Friction) value of 0.42 or greater replacing the previous 0.60 SCOF (Static Coefficient of Friction) rating over a wet tile surface per the ASTM C 1028 test method. It is Shaw’s commitment to our customers to provide accurate information for our tile products that ensure this new COF criteria in the ANSI A137.1 standard is met and maintained such that Shaw, Shaw Customers and End Users collectively, do our part to minimize any potential for slips and falls in residential and commercial interiors.
